

## INSTRUCTIONS

These are all CloudFormation templates which you can run on AWS CloudFormation to setup your environment.

To understand how to run a CloudFormation template, follow this link <https://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/cfn-using-console.html>

The template named `securityhub_automation.yaml` is used for automatically exporting security hub finding to a central S3 bucket. The templates for Macie, GuardDuty, Inspector and SecurityHub are all standard templates from AWS. These templates need to be run before the `securityhub_automation.yaml` template.

The `securityhub_automation.yaml` has the following configuration:

Upon execution of these templates, you should see findings from different accounts.

a1-securityhublogbucket-1sjxhfvigitsxv
